Alaska State Library

Daniel Cornwall,

daniel.Cornwall@alaska.gov

This session will be recorded

AGENDA

- What is “Everything”?
- Overview of searching and results
- I want ...
 - Full text right away
 - Only stuff that is peer reviewed
 - Only published in the last five years
 - Only stuff related to Alaska
 - Other options

AGENDA, Continued

- Alerts – keep your searches fresh
 - How they are created
 - When you to do it yourself
 - When to let us make an alert for you
- Your Questions and Demo Opportunity

What is Everything?: What it's Not

- Books and other items not available through the Joint Library Catalog
- Statutes, Legal Opinions, Regulations

What is Everything?: What it is

- Simultaneous search of most of our databases, along with some others
- A few examples:
 - Joint Library Catalog
 - Medline
 - Digital Access to Scholarship at Harvard
 - HathiTrust
 - JSTOR
 - Science Direct

No, Really: What is Everything?

- Search “FT Y OR FT N” without quotes, then “show more”

Results

Extras

The screenshot shows the Alaska State Library search results page for the query "coast guard". The page is divided into three main sections: "Ways to Limit" on the left, "Results" in the center, and "Extras" on the right. The "Ways to Limit" section includes filters for "Limit To" (Full Text, Scholarly, Catalog Only) and "Format or Document Type" (All Results, News, Magazines, Electronic Resources, Books, Academic Journals). The "Results" section displays two search results, each with a title, author, and a table of location, call number, and status. The "Extras" section includes "Alaska's Digital Archives" and "Library Resources".

Lewis Pugh speaks out against fracking. 'Standing Up To Goliath' address to Shell (Cape Town) By Lewispugh (Own work) [CC-BY-SA-3.0 (<http://creativecommons.org/licenses/by-sa/3.0/>), via Wikimedia Commons]

Hydraulic fracturing, or "fracking," is a mechanical process that uses fluid pressure to release quantities of petroleum or natural gas from deep below the earth's surface. During conventional drilling, industrial systems extract oil and gas from accessible belowground reservoirs and collect it at the surface. Fracking involves the high-pressure injection of chemically treated water and sand into shale rock, which breaks up the shale and releases quantities of oil and gas that are not accessible by conventional drilling methods. The sand displaces the oil or gas, which is pumped back to the wellhead at the surface and separated from the water. The process of fracking has been in use since 1949, but the recent addition of horizontal drilling in addition to vertical drilling has improved the capabilities and efficiency of the technique, while at the same time increasing its risks. For this and other reasons, fracking is currently controversial. While proponents of fracking argue that it allows access to otherwise unreachable energy sources, creates jobs, and keeps energy prices low, critics posit that the technique pollutes the environment, and subverts the public interest in favor of energy industry profits. According to the financial data firm Bloomberg, 87 percent of the world's fracking took place in North America in 2011. In 2012, fracking produced an estimated \$30 billion worth of oil and gas resources. In the United States, fracking operations exist in Pennsylvania, North Dakota, California, Texas, Arkansas, Colorado and New Mexico. Known reservoirs of shale oil and shale gas are present throughout the country, particularly in northeastern states like West Virginia, Ohio, and New York.

History

Oil producers began experimenting with water and explosive material during the late nineteenth century in the effort to access hard-to-reach, shale-embedded sources of natural gas and petroleum. According to

state rulemaking

NAICS/Industry Codes: 213112 Support Activities for Oil and Gas Operations
213111 Drilling Oil and Gas Wells
211111 Crude Petroleum and Natural Gas Extraction

Abstract: Rulemaking is an integral component of environmental policy at both the federal and state level; however, rulemaking at the state level is understudied. With this research, we begin to fill that gap by focusing on rulemaking regarding the issue of hydraulic fracturing (fracking) in three states: Colorado, New York, and Ohio. This collection is well suited to state
